Skills

- Programming Languages: HTML, CSS, JavaScript, Java

- Frameworks and Libraries: Tailwind CSS, Spring Framework

- Additional Tools and Technologies: Git, SQL, RESTful APIs

Projects

Spring Sound App

- Developed a command-line program using the Spring framework.

- Integrated the Vagalume API to access music and artist data.

- Implemented functionalities for searching and retrieving information about songs and artists using the Vagalume API.

- Created a simple and intuitive command-line interaction system for users to access program functionalities.

- Developed the feature to save relevant information, such as searched songs, into a database for future queries and analysis.

- Utilized data persistence technologies like JPA (Java Persistence API) to interact with the database efficiently and securely.

- Managed project dependencies and configurations using the Maven dependency manager.

Email Administration Application

- Developed a command-line program for an "Email Administration Application" using Java.

- Implemented functionalities for generating emails based on the first name, last name, and department.

- Developed the feature to generate secure passwords.

Education

Software Engineering, Estácio   **2023 – 2027**
